

Press release

GMP MANUAL - Good Manufacturing Practice & Implementation **Published by Maas & Peither AG GMP Publishing**

The GMP MANUAL is a comprehensive, peer-reviewed how-to-do document for daily business in the pharmaceutical and related industries. It combines regulatory guidelines and their interpretation in practice. It is published on approx. 3,500 pages in a series of 5 files plus CD-Rom or as GMP MANUAL Online at www.gmp-manual.com with access for all employees.

The content consists of two parts: “GMP in practice” and “GMP regulations”. One of our biggest advantages is that the GMP MANUAL is updated twice a year, which keeps you and your staff up-to-date with the continuously changing GMP requirements and interpretations.

GMP in Practice (part I)

This part of the manual consists of 18 detailed modules written by a team of more than 40 international specialists from industry, authorities and suppliers. The following topics are included on more than 1,800 pages e.g.: Quality Management, Personnel, Quality Control, Documentation, Contract Manufacturing, Quality Tools, Premises, Qualification, Process Validation, Cleaning Validation, Computer System Validation, Production, Equipment, Packaging and Inspections, Pharmaceutical Water, Sterile Production, Research and Development, Active Pharmaceutical Ingredients.

GMP Regulations (part II)

This part covers the most important GMP guidelines from EU, FDA, ICH, PIC/S and WHO, and includes a complete index. Although a lot of guidelines can be downloaded from the internet, we provide a complete set with index and a guaranteed update.

There are hyper-linked cross-references throughout both parts. This useful way of moving around the document gives details of where relevant topics can be found and is especially easy to use in the digital version (CD-Rom or online). All information can be obtained from one single source. For example: References are made to guidelines and regulatory documents, including those from EU, PIC/S and FDA.

This compendium is the most extensive GMP knowledge database worldwide. An international advisory board takes care of the development and improvement of the contents. All subjects are dealt with logically and in great detail. Particularly the use of checklists, examples and how-to-do descriptions facilitate application of GMP in daily work.

Price: GMP MANUAL plus CD-Rom: 695.- €, two updates per year, each approx. 160 € (excluding shipping and tax)

GMP MANUAL Online company licence (floating licence): 2,100 € installation cost,
Subscription fee: 950 €/year
